

DMITRI MENDELEEV

Russian chemist • 1834–1907

Dmitri Mendeleev was the brains behind one of the most important tools used by chemists and materials scientists all over the world—the periodic table. He was the youngest of 14 siblings, and life was hard for the family, especially after their father died. Dmitri's mother, however, noticed his brilliant mind and was determined to give him a good science education. In 1849, she walked with him across Russia to help him find a place at university.

Dmitri finished top of his class, then became a chemist and teacher. It was an exciting time to be a scientist—chemistry was changing so fast that Dmitri had to write his own textbook!

The Principles of Chemistry—Dmitri's chemistry textbook

Dmitri arranged elements in different ways to try and spot patterns.

Li	Be	B	C	N	O	F	
Na	Mg	Al	Si	P	S	Cl	
K	Ca		Ti	V	Cr	Mn	Fe, Co, Ni, Cu
(Cu)	Zn			As	Se	Br	
Rb	Sr	Yt	Zr	Nb	Mo		Ru, Rh, Pd, Ag

He left gaps for unknown elements!
