

Your baby at...

7-8 months

Your baby's physical and mental skills are improving dramatically. His *hand-eye coordination* may now be sophisticated enough for him to *grab* and *grip* objects, *pass* them from **one hand** to **another**, and *put* them into a container. He still loves *repetition* and will enjoy the **simple stories** you tell him again and again. He's becoming aware of **everyday sights and sounds** around him now, too, and learning about *object permanence*.
