

Baby tip

If your baby isn't settling as you try these poses, keep murmuring and cooing gently to him to make him feel secure.

Relaxed baby

Lie in the same position (on your back, with knees bent, feet flat on the floor, and head supported), with your baby lying on his tummy on your chest so you are heartbeat-to-heartbeat. Check that you are both as comfortable as possible. Hold him gently, close your eyes, and breathe slowly in and out. Try not to move too much and rest deeply for as long you both enjoy it.
