

Mango popsicles

If your baby is ready for a new sensation, try a homemade popsicle so she can experience something very cold in her mouth. If she's teething, the icy fruit purée may also help soothe her gums. Mango is high in vitamin C and good for boosting the immune system, and is naturally sweet enough to not need the addition of sugar. Buy chunky wooden popsicle sticks and use very small non-PVC plastic containers as molds. Makes 6–8 popsicles.

ingredients

7 oz (200 g) fresh ripe mango cut into cubes
juice of half a lemon

method

- 1 Purée the cubes of fresh mango until smooth.
- 2 Mix the purée with the lemon juice and pour the mixture into 6–8 small egg molds. Press a wooden popsicle stick into the center of each and put in the freezer.
- 3 Once the popsicles are frozen, transfer them in their molds to a plastic container or freezer bag to prevent freezer burn.
- 4 To serve, remove a popsicle from the freezer and allow it to warm up a little; wait for a minute or so, or longer. To check if the popsicle is ready for your baby to eat, touch it with your clean finger to make sure it does not stick to your skin. Remove the popsicle from its mold, put a bib on your baby, since she may get a little messy, and hand her the popsicle to try.
