

Texture track

If your baby loves cars and toys with wheels, create a mini course of different textures for him to explore and understand how quickly or slowly his toy moves.

Lay a large mat on the floor. Fold a piece of stiff cardboard in half and cover one half in tinfoil to make a smooth, slippery surface. Position the folded card on the mat to make a ramp and arrange a tray with a thin layer of fine sand at the base of the smooth, slippery slope.

Talk about different textures and speeds as you show your baby how to push the car up the cardboard slope, release the car in his hand so it rolls down the smooth, shiny ramp, and comes to a halt in the grainy sand. See if your baby can learn to wait for the action word “Go!” before releasing the car to roll down the ramp.
