

Your baby at...
2-3 months

Your baby may be noticing his *hands* around now, learning that he can *open* and *close* them and **play with his fingers**. He may also be **experimenting** with making different *sounds* as he tries to respond to your chats with him. He may even **surprise you** with his *first giggles* and **gurgles**. As his **muscle control** in his **neck** improves, he will now be *turning* his **head** from **side to side** and *lifting* his head briefly during **tummy time**.
