

Sleepy baby

Now is a good time to establish a regular bedtime routine for your baby if you haven't done so already. Good sleep is key for him to process the day's play and activities, and enjoy more play time tomorrow.

Sleep is stimulus-dependent, so a bedtime routine is all-important—it needs to involve the same activities in the right order at roughly the same time every evening. Introduce story time and snuggle time after bath time and an evening feeding, before you put your baby to sleep in his crib. Make it as special as possible with slightly dimmed lights and a favorite book in a relaxing corner, for example. While you can swap bedtime duties with your partner as often as you both want, always follow the same routine, such as bath, feeding, story time, snuggle, kiss, and bed.
