

037 Make a kite

1
HR

Flying a kite is a great way to have fun in the summer. You just need an open space that's free of trees and overhanging wires. Add a breeze and your kite, and you're ready for takeoff.

What you need

- Split stakes or basket-weaving reeds
- Glue • Tissue paper
- Cotton thread
- Stapler • Kite string

1 Soak the stakes overnight. Tie them to form a frame. Put glue on the bottom half. Lay the frame glue-side down on tissue paper.

2 Cut around the frame, leaving a 2 in (5 cm) border. Snip the border, fold it over, and glue down. Repeat with the other half.

3 Cut two pieces of string, one slightly longer and the other wider than the kite. Knot them together in the middle then tie the ends to the frame.

Bridle line

Kite string

Put your back to the wind, hold up the kite by the bridle line with one hand, let it catch the breeze, then let out the line. As the kite moves away, pull on the line to make it climb.
