

Threading a needle

Before you can start sewing, you need to **thread your needle**. Next, you make a knot in the end of the thread. This is the very first step to sewing!

Top tip

To thread your needle easily, snip the end of the thread, wet it, then thread it.

1

Line up needle and thread

Smooth the end of the thread. Hold the needle in one hand and the end of the thread in the other.

2

Push thread through needle

Slip the end of the thread through the eye of the needle. If the eye is big enough it should pass through easily.

Choose a needle that works with your thread.

Knot the longer end of the thread.
