

Top tip

Plan your designs on a piece of paper before you start making your cards.

You will need

- card • a piece of thick cardboard
- construction paper • pins • embroidery thread
- tapestry needle • buttons

How to make a card

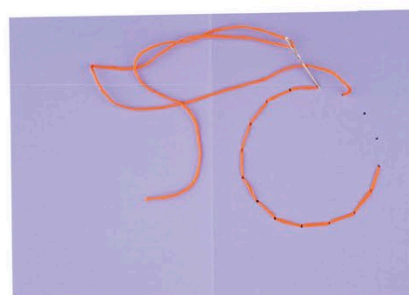

Fold the construction paper in half, then open it out again. Place it on cardboard.

1

Prick out the design

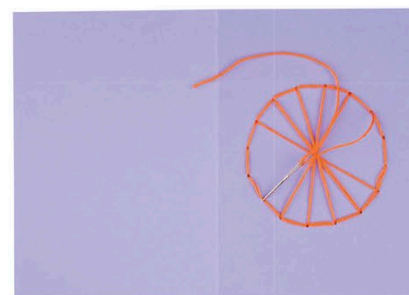

Trace a design from page 59 onto paper or draw your own. Add dots to show where the stitches will go. Push a pin through the dots and the paper.

2

Sew your design

Thread a needle and tie a knot in the end. Pass the needle through a hole from the inside. Using backstitch, pass the needle through all the holes.

3

Finish your design

Keep passing the needle through the holes until the design is finished. Pull the needle to the inside and knot the thread.

Top tip

Embroidery thread shows up well, since it is thicker than ordinary sewing thread.

Simple **patterns** are fairly easy to make.
