

Two layers of
fleece fabric

Top tip

Fleece fabric is
great because it's
soft, cuddly, and it
doesn't fray.

Top tip
If you use two layers
of fleece for the water jet,
it's less likely to flop over. You
can also add a bit
of stuffing to make it
a thicker shape.

Two layers of
fleece fabric

1

Cut out the body

Copy the templates on page 61 onto
construction paper. Cut them out; pin to
two pieces of fleece. Cut out the shapes.

2

Sew the water jet

Put the two pieces for the water jet
together and sew them up using running
stitch. Add stuffing if you like.

Attach the water jet.

5

Sew the whale closed

Pin the water jet in position, then start
sewing up the whale using running
stitch—but leave a gap at the front.

6

Add the stuffing

Push the soft-toy stuffing into
the whale using a pencil or
your finger to fill up the tail.
