

Length

We can measure how long, wide, and tall things are with rulers and tape measures. They measure in inches, feet, and yards (imperial) or millimeters, centimeters, and meters (metric).

This side measures in inches.

Ruler

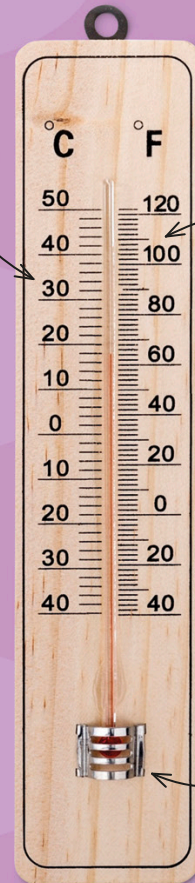

Most rulers show 12 inches on one side and 30 centimeters on the other.

There are 10 millimeters in one centimeter and 100 centimeters in one meter.

This scale shows degrees Celsius ($^{\circ}\text{C}$).

This scale shows degrees Fahrenheit ($^{\circ}\text{F}$).

The liquid moves up the tube as the temperature rises.

Temperature

This is a measure of how hot or cold things are. We use a thermometer to record the temperature. Units of temperature are degrees Fahrenheit (imperial) or degrees Celsius (metric).

Measuring

Measurements help us build, cook, shop, describe the weather, and much more. We use different units to measure things. The two main measurement systems are called **imperial** and **metric**.
