

Volume

Volume is the size of an object in three dimensions—length, width, and height. It tells you how much space something takes up.

Liquids slosh around and flow, so we put them in a container to measure them.

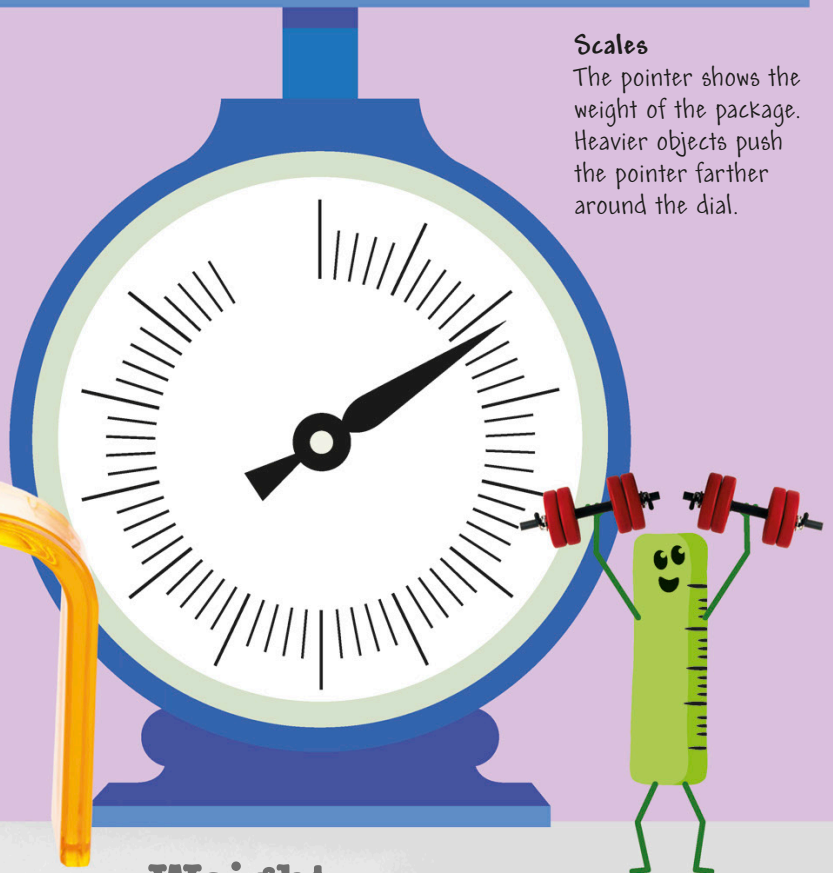

You measure the level of the liquid against the scale.

Measuring cup

The scale on the cup tells you how much liquid there is. We measure liquid volumes in fluid ounces, cups, and pints (imperial) or milliliters and liters (metric).

Scales

The pointer shows the weight of the package. Heavier objects push the pointer farther around the dial.

Weight

Weight tells us how heavy something is. We measure weight in ounces and pounds (imperial) or grams and kilograms (metric).
