

Color

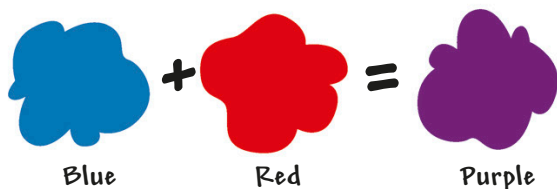

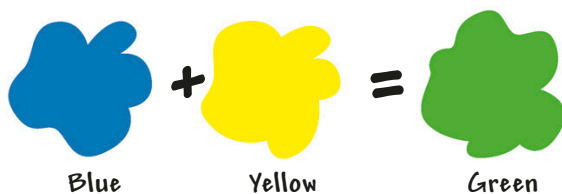

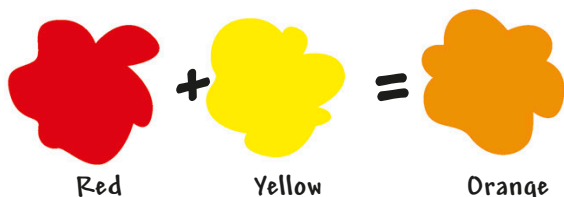

Colors bring our world to life. You can mix just three colors—red, blue, and yellow—to make any other color! Red, blue, and yellow are called **primary colors**.

Orange

Orange, yellow, and red are said to be warm colors. They remind us of sunshine, summer, and warm fires.

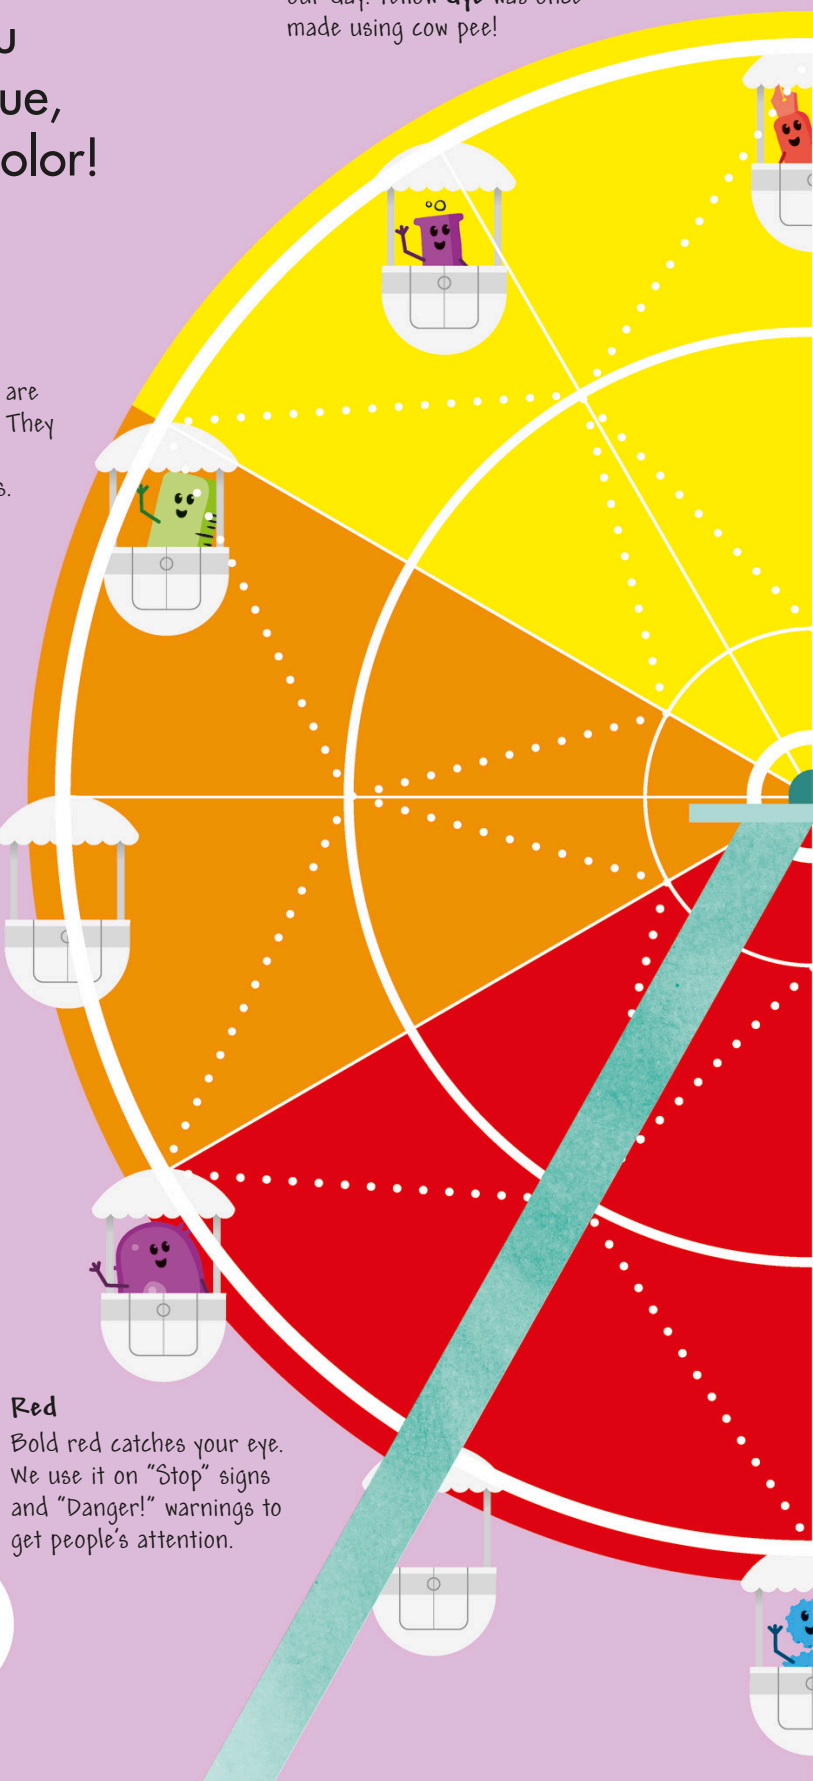

Secondary colors

When you mix two primary colors, you get a secondary color. Orange, green, and purple are **secondary colors**.

Yellow

Cheerful yellow brightens up our day. Yellow **dye** was once made using cow pee!

Red

Bold red catches your eye. We use it on "Stop" signs and "Danger!" warnings to get people's attention.

Red, blue, and yellow are the only colors you can't make by mixing two other colors.
