

Pair of sockeye salmon, one of seven kinds in the Pacific

BREEDING COLORS

Adult salmon change body shape and color when they swim up rivers to spawn. Males develop hooked jaws, while females' bodies become swollen with eggs.

Small, second dorsal fin

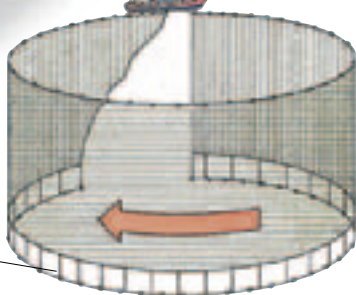

Symmetrical caudal (tail) fin

Anal fin

Purse seine nets let out in midwater around a shoal of fish

When shoal surrounded, the bottom of the net is closed and it is dragged onto boat

Weights at bottom and floats at top of net help keep it straight

Purse seine nets

Engraving of an Atlantic cod

IN BATTER

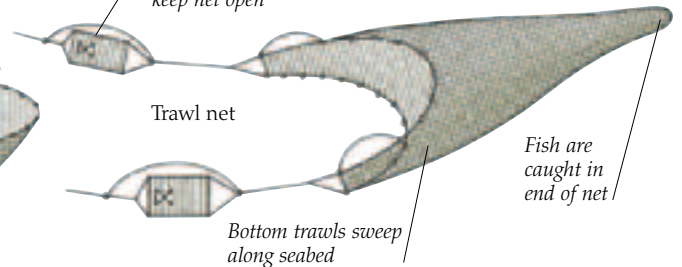

Atlantic cod are a favorite in the popular British dish of fish and chips. Although still caught in bottom trawls, many stocks are overfished or severely depleted.

Heavy boards on each side keep net open

Trawl net

Bottom trawls sweep along seabed

Fish are caught in end of net

IN THE NET

This is an old-style steam engine trawler that was used in the 1940s and 1950s for fishing in the northern Atlantic, off Iceland and Greenland. The nets were not let over the back of the boat like modern trawlers, but were pitched over the sides. Modern trawlers are more efficient because they use bigger nets.

Hanging blocks for trawl net ropes

Deck lights for night fishing

Trawl winch

John Henry, a side trawler from Grimsby, England

Funnel

Mizzen light
