

Highest volcanoes

The highest volcanoes are in the Andes, where molten rock rises through Earth's crust near the edge of the South American Plate.

▲ Nevados Ojos del Salado

22,615 ft (6,893 m); Chile/Argentina; erupted c. 700 CE

▲ 2 Llullaillaco

22,110 ft (6,739 m); Chile/Argentina; erupted in 1854, 1868, and 1877

▲ 3 Tipas

21,850 ft (6,660 m); Argentina; isolated, little studied; no recent eruptions

▲ 4 Nevado de Incahuasi

21,722 ft (6,621 m); Chile/Argentina; no recent eruptions

▲ 5 Cerro el Cónдор

21,430 ft (6,532 m); Argentina; no recent eruptions

Highest versus tallest

A mountain's height is measured from sea level. Everest is indisputably the highest mountain on Earth. Mauna Kea, in Hawaii, is nowhere near as high as Everest, but it is a volcano rising from the deep ocean floor. If measured from its base to its peak, Mauna Kea is Earth's tallest mountain.
