

Land, sea, and air

Norway-Russia border

At this point where Norway, Finland, and Russia meet, you can be in three time zones at once. It's the only place in Europe where that happens.

Russia

As the country that spans the greatest distance west to east, Russia has the most consecutive time zones, with 10 (and 11 including Kaliningrad).

International Date Line

Greenwich, London, UK

Where global standard time was first agreed.

China

Some countries prefer not to be divided by different time zones, even if they cross more than one. Though it spans five time zones, all of China is at UTC+8 hours.

India

Some nations set their clocks to half- or even quarter-hour time zones, so they can be as close to the worldwide time zone as possible.

Prime Meridian

The Prime Meridian is a line of longitude running from the North to the South Pole and through Greenwich, UK. It is the origin of worldwide time and given a longitude value of 0°. All time zones are measured from this, according to 24 other lines of longitude corresponding to the 24 hours in the day.

These are the worldwide times according to the position of the sun in the sky. Artificial time zones often differ according to political borders, in order to unite an area or an entire nation under one time.
