

Utah

Utah's unusual terrain includes strangely shaped rock formations, vast salt flats, and rugged mountains. The Utahraptor dinosaur fossil was found in a quarry here and named after the state. Utah is also home to the largest salt lake in the Western Hemisphere, known as Great Salt Lake.

The state flower of Utah is the sego lily.

State Facts

Abbreviation: UT

Capital: Salt Lake City

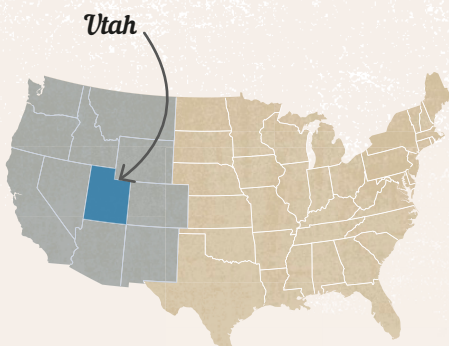

Nickname: The Beehive State

Statehood: 1896, 45th state

Population: 3.3 million people

State tree: quaking aspen

State animal: Rocky Mountain elk

Fancy formations

Mind-blowing rock formations are a sight to see in Utah. They tower high in the air in weirdly beautiful shapes known as spires, pinnacles, hoodoos, and arches. Arches National Park has more than 2,000 natural sandstone arches. If you're lucky enough to discover a new arch, you get to name it!

Great Salt Lake is bigger than the state of Rhode Island.
