

Iowa

Wild prairie roses

Farming is king in Iowa, and more than half of the country's corn comes from its plentiful crops. Iowa's also first in the nation in wind power, which is a great, environmentally friendly way to generate electricity. It's also home to a famous gymnastics institute that has trained Olympic gold medalists.

An Iowa corn field

Corn

Iowa produces more corn than any other state. But only 1 percent is the delicious "sweet corn" that humans eat. The rest is "field corn," which is used in many products, such as cereal and livestock feed.

Wind power supplies more than 40 percent of Iowa's electricity.
