

132 Dice and cards

Playing with dice and cards is fun
When your multiplication work is done.

- 1 Multiply the two numbers shown on the dice:

$$\begin{array}{c} \text{4} \times \text{6} = \square \\ \text{2} \times \text{4} = \square \end{array}$$

$$\begin{array}{c} \text{4} \times \text{4} = \square \\ \text{2} \times \text{2} = \square \end{array}$$

- 2 Add the numbers shown on the dice, and then multiply your answer by 6.

$$\begin{array}{c} \{ \text{1} + \text{4} \} \times 6 = \square \\ \{ \text{4} + \text{4} \} \times 6 = \square \end{array}$$

$$\begin{array}{c} \{ \text{2} + \text{4} \} \times 6 = \square \\ \{ \text{4} + \text{2} \} \times 6 = \square \end{array}$$

- 3 Jack threw a double six 5 times.
What was his total?

- 4 These are the scores of four players. They each need to throw a double to reach 100 points. What is the number that needs to appear on both dice for each player? Fill in the spaces in the table.

Player	Score	Number required on both dice
1	90	
2	98	
3	94	
4	88
