

Time filler:

Another way to work out the answer to $9 \times$ a number is to multiply the number by 10 and then take away the number from the answer. For example, $15 \times 9 = (15 \times 10) - 15 = 135$. Choose some 2-digit numbers and give this a go.

- 6 Divide each number by 9:

9 36 45 90 108

- 7 Jake needed £468 to buy a new television. He decided to save an equal amount over 9 weeks to reach the total. What is the amount he needed to save each week?

- 8 How many shapes are there in each group?
