

Using the 2x table

Write the sums to match the stamps.

 $6 \times 2 = 12$	 $8 \times 2 = 16$
 $3 \times 2 = 6$	 $5 \times 2 = 10$
 $9 \times 2 = 18$	 $1 \times 2 = 2$

Draw the stamps to match these sums.

3×2 	4×2
2×2 	7×2

Children should realise that the first number (the number of rows) is counted down the strip and not across. Explain how using their times tables and counting the rows and the number across saves them time. This task will be much easier if children can already recite their 2x table.

Using the 2x table

Each face stands for 2. Join each set of faces to the correct number.

	2
	6
	8
	10
	12
	14
	16
	20

Children will need to be able to count in 2s up to 20 before tackling this activity. If they find it difficult to see each single face as a '2', it would be worth using a collection of 2p coins and reinforcing the fact that there is only one coin but it represents two pence.

Using the 2x table

How many eyes?

 $3 \times 2 = 6$ eyes	 $5 \times 2 = 10$ eyes
 $9 \times 2 = 18$ eyes	 $2 \times 2 = 4$ eyes
 $8 \times 2 = 16$ eyes	 $4 \times 2 = 8$ eyes

Draw your own pictures to match these number sentences.

$2 \times 2 = 4$ 	$10 \times 2 = 20$ Child's drawing
$3 \times 2 = 6$ Child's drawing	$7 \times 2 = 14$ Child's drawing

Encourage your child to talk out loud as they are doing the activity. Then you will be able to check that they understand what they are doing. Are they using the number of pairs as the first number and the number in the pair (i.e. 2) as the second?

5x table

Count in 5s, colour, and find a pattern.

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

Write the answers.

$1 \times 5 = 5$	$2 \times 5 = 10$	$3 \times 5 = 15$	$4 \times 5 = 20$
$5 \times 5 = 25$	$6 \times 5 = 30$	$7 \times 5 = 35$	$8 \times 5 = 40$
$9 \times 5 = 45$	$10 \times 5 = 50$	$11 \times 5 = 55$	$12 \times 5 = 60$

How many sweets?

	4 lots of 5	$4 \times 5 = 20$ sweets
	3 lots of 5	$3 \times 5 = 15$ sweets
	8 lots of 5	$8 \times 5 = 40$ sweets
	7 lots of 5	$7 \times 5 = 35$ sweets

Can children tell you what they have noticed about the numbers they have coloured in on the grid? (The final digit is always 0 or 5.) Can they use this information to tell you whether 78, 90, or 23, or even 995 are in the 5x table?
