

Multiplying by 5

Draw a ring around rows of 5. Complete the sum.

$$3 \times 5 = 15$$

Draw a ring around rows of 5. Complete the sum.

$$5 \text{ rings of } 5 \quad 5 \times 5 = 25$$

$$2 \text{ rings of } 5 \quad 2 \times 5 = 10$$

$$1 \text{ ring of } 5 \quad 1 \times 5 = 5$$

$$6 \text{ rings of } 5 \quad 6 \times 5 = 30$$

$$4 \text{ rings of } 5 \quad 4 \times 5 = 20$$

$$7 \text{ rings of } 5 \quad 7 \times 5 = 35$$

Children need to be reminded how much faster it is to be able to say, '7 rows of 5, that's 7x5, that's 35' than it would be to count all 35 holes individually.

Dividing by 5

Write a number sentence to show how many cubes are in each tower.

15 cubes altogether

5 towers

$$15 \div 5 = 3$$

Write a number sentence to show how many cubes are in each tower.

20 cubes altogether

5 towers

$$20 \div 5 = 4$$

30 cubes altogether

5 towers

$$30 \div 5 = 6$$

25 cubes altogether

5 towers

$$25 \div 5 = 5$$

10 cubes altogether

5 towers

$$10 \div 5 = 2$$

35 cubes altogether

5 towers

$$35 \div 5 = 7$$

40 cubes altogether

5 towers

$$40 \div 5 = 8$$

Using building bricks to show each sum practically would reinforce understanding. Can children describe in words what they have done, e.g. '40 bricks shared between 5 towers gives 8 bricks in each tower'?

Using the 5x table

Write the number that is hiding under the star.

$$4 \times 5 = 20$$

Write the number that is hiding under the star.

$$2 \times 5 = 10$$

$$3 \times 5 = 15$$

$$5 \times 5 = 25$$

$$1 \times 5 = 5$$

$$10 \times 5 = 50$$

$$8 \times 5 = 40$$

$$9 \times 5 = 45$$

$$0 \times 5 = 0$$

$$7 \times 5 = 35$$

$$6 \times 5 = 30$$

Children need to be able to recite the 5x table (even if only slowly and in order) before they tackle this activity. Encourage them to read the number sentence out loud: 'something (the star) times 5 = 10', before they try to work out what the 'something' is.

Using the 5x table

Each frog stands for 5. Join each set of frogs to the correct number.

Explain that there are more numbers than sets of frogs, and therefore not every number will join up. Remind children that the last digit in all the numbers in the 5x table is either 0 or 5. Can they use this fact to predict which numbers will not be joined to the frogs?
