

At the sweet shop with the sixes

Life is sweeter when you know your times tables, and it's easier to work out prices and amounts in shops.

Here are 6 large lollipops, all bright and sugary.

Here are 2 groups of 6 lollipops.
How many are there now?

$$2 \times 6 = 12$$

Remember, you can write the sum 2×6 or 6×2 , the answer will be the same.
