

When do we use the times tables?

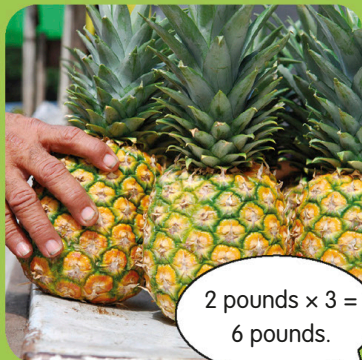

We use the times tables constantly in our everyday lives.

$3 \text{ eggs} \times 3 = 9 \text{ eggs.}$

When we're cooking.

$2 \text{ pounds} \times 3 = 6 \text{ pounds.}$

When we're shopping.

$10 \text{ slices} \div 5 = 2 \text{ slices each.}$

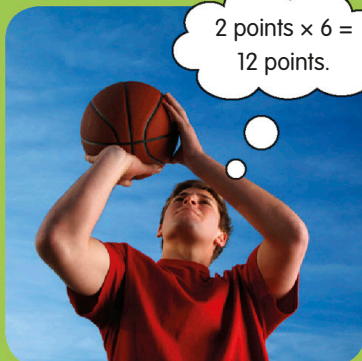

When we're sharing.

We use the times tables all the time – sometimes without knowing it!

$2 \text{ points} \times 6 = 12 \text{ points.}$

When we're playing sports.

$5 \text{ minutes} \times 5 = 25 \text{ minutes past.}$

When we're telling the time.

Learning with songs

It's easy to remember words when they're put to a tune. To help you learn your times tables, we've put together some songs that you can download from the Dorling Kindersley website.

The songs repeat each times table five times. Try to join in with singing the times tables as soon as you can. You can play a game by trying to call out the answers before they're sung. If you like, you can dance to the music too!

To download the songs, go online to this internet address:
