

Practice makes perfect

Read the questions and answers in the **5x** table out loud. Then give this book to a friend, and ask them to test you. Can you remember the answers?

Backwards and forwards

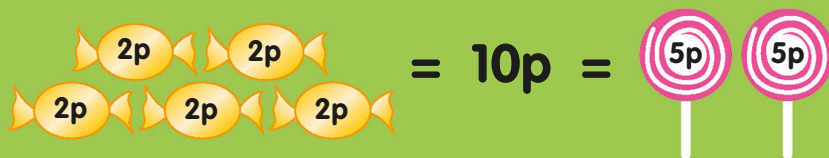

Have you noticed that the answer to **2 x 5** is the same as the answer to **5 x 2**?

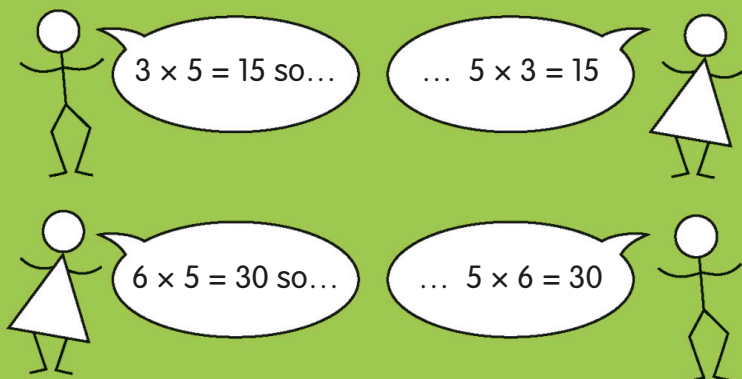

$$5 \times 2 = 10$$

$$2 \times 5 = 10$$

Five **2-pence** toffees cost exactly the same as two **5-pence** lollipops.

Multiplications give the same answer whichever way round you put the numbers. This means that you already know some of the answers to the other times tables.

Cleaning windows

You can also think of the **5x** table as a number line. Imagine a window cleaner who stops at every fifth floor of a skyscraper. Where will he stop next?

Don't look down!
