

10x

Here's the 10 times table:

$1 \times 10 =$	10
$2 \times 10 =$	20
$3 \times 10 =$	30
$4 \times 10 =$	40
$5 \times 10 =$	50
$6 \times 10 =$	60
$7 \times 10 =$	70
$8 \times 10 =$	80
$9 \times 10 =$	90
$10 \times 10 =$	100
$11 \times 10 =$	110
$12 \times 10 =$	120

Can you see the pattern in the answers?
It's like counting to 12, adding a 0 to each number.

The ten times table

You don't need to memorize this times table. All you need to learn is the simple pattern in the numbers.

Just add zero

To make a number ten times larger, you add a zero to the end. This means that the units in the number become tens, and if there are any tens they become hundreds.

There are 10 pencils in each group. How many altogether?

How many paperclips in these four groups of 10?

Now try multiplying these large numbers by 10.

$$73 \times 10 =$$

$$135 \times 10 =$$

$$245 \times 10 =$$

Can you work out what **451,236** multiplied by ten equals?
