

$10 \times 1 =$	10
$10 \times 2 =$	20
$10 \times 3 =$	30
$10 \times 4 =$	40
$10 \times 5 =$	50
$10 \times 6 =$	60
$10 \times 7 =$	70
$10 \times 8 =$	80
$10 \times 9 =$	90
$10 \times 10 =$	100
$10 \times 11 =$	110
$10 \times 12 =$	120

Make a times tables slider

This simple make-and-do project will turn times tables practice into a fun quiz game.

1) Take an A4-sized piece of coloured card, and fold it in two lengthwise. Cut a rectangular hole, about 1.5 cm ($\frac{1}{2}$ in) high and 5 cm (2 in) wide. If you like, you could decorate it with felt pens or stickers.

2) Now take a coloured piece of paper, and cut it into a strip 28 cm (11 in) long and 9 cm ($3\frac{1}{2}$ in) wide.

3) Write the questions and answers to a times table down the length of the strip of paper. The answer to each question should be written underneath it.

4) Now put the strip of paper inside the folded card, and move it about until the first question appears in the box. Say your answer out loud, then check it by pulling the strip upwards.

Make a different strip of paper for each times tables that you want to learn!

Picnic puzzler

If forks come in packs of **6**, and knives come in packs of **10**, how many packs of forks and how many packs of knives would you need to buy in order to have the same number of each?

Answer: You would need 5 packs of forks and 3 packs of knives.
