

11x

Here's the 11 times table:

1	×	11	=	11
2	×	11	=	22
3	×	11	=	33
4	×	11	=	44
5	×	11	=	55
6	×	11	=	66
7	×	11	=	77
8	×	11	=	88
9	×	11	=	99
10	×	11	=	110
11	×	11	=	121
12	×	11	=	132

The eleven times table

A helpful pattern

There is a simple way of multiplying single-digit numbers by **11**. Imagine you're multiplying **3** by **11**. Just think of the same number again, written next to it: **33**.

Another pattern

There is another pattern that will help you remember the three-digit answers for **10** × **11**, **11** × **11**, and **12** × **11**. It also works with other problems up to **18** × **11**.

The first and last digits in the answer to **10** × **11** are **1** and **0**.

Add the first and last numbers of the answer together to get the middle number: **1 + 0 = 1**.

$$\begin{array}{r} \textcircled{10} \times 11 = 1 \ 0 \\ + \\ 10 \times 11 = 110 \end{array}$$

$$\begin{array}{r} \textcircled{12} \times 11 = 1 \ 2 \\ + \\ 12 \times 11 = 132 \end{array}$$

The first and the last number in the answer to **12** × **11** are **1** and **2**.

Add the first and last numbers of the answer together to get the middle number: **1 + 2 = 3**.
