

11x

Halftime drinks and snacks

You're buying the halftime refreshments for your local football team. There are **11** people on the team. How much will it cost you to buy enough of these for the whole team? Remember that **100p** is **£1**.

Invisible number 11 trick

This magic trick will amaze your friends.

1. Dip a paintbrush in lemon juice and write the number **11** on a piece of paper. When the juice dries, the answer will be invisible. Show this blank paper to your audience.

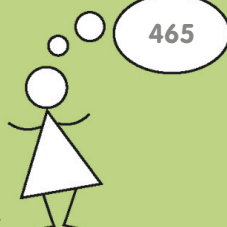

5. Now tell them to divide it by the least lucky number: **13**.

$$66,495 \div 13 = 5,115$$

6. Finally, tell them to divide by the number they first thought of.

$$5,115 \div 465 = 11$$

2. Ask a volunteer to secretly think of a three-digit number.

3. Ask them to type the number into a calculator twice. If the number they thought of was **465**, they should type:

465465

4. First tell them to divide that number by lucky number **7**.

$$465,465 \div 7 = 66,495$$

7. Tell your audience that you are going to magically write the answer on the blank paper. Hold the paper near a hot lightbulb, and the number **11** will magically appear!
