

3x

Bon appetit!

Most people eat **3** meals each day.

How many meals do you eat in a week?

Can you work out how many meals you'd eat in a 30-day month?

Or in a whole year? (See pages 88–89 for long multiplication tips.)

Minesweeper

Can you find a safe route through this minefield? Start where it says “go” and move across, up, or down until you reach “end”. But you must avoid the mines! Any square with a multiple of three has a mine under it.

GO	2	5	13	21	19	30	12	24	6
6	11	27	8	32	10	15	26	18	7
25	36	1	24	3	29	4	17	9	END
31	8	22	16	30	18	21	14	31	20

The solution is on page 96.

It all adds up

The first three answers in the **3x** table are **3**, **6**, and **9**. If you add together the digits of multiples of three, they add up to **3**, **6**, or **9**. You can use this as a way of checking your answers.

With 27 → $2 + 7 = 9$

With 15 → $1 + 5 = 6$
