

FLYING SCOTSMAN The No. 4472 *Flying Scotsman* powers along the tracks of the Carlisle to Settle line in the northwest of England, a service known as the “Cumbrian Mountain Express.” The 71-ft-2-in- (21.7-m-) long locomotive weighed more than 109 tons, but generated enormous pulling power. In 1934, it became the first steam locomotive officially recorded to exceed 100 mph (160 km/h).
