

Built-in tray holds harpoon rope made of leather

Harpoon

Inuit kayak Arctic

Support for canopy, erected in bad weather

Open stern where outboard motor can be fitted

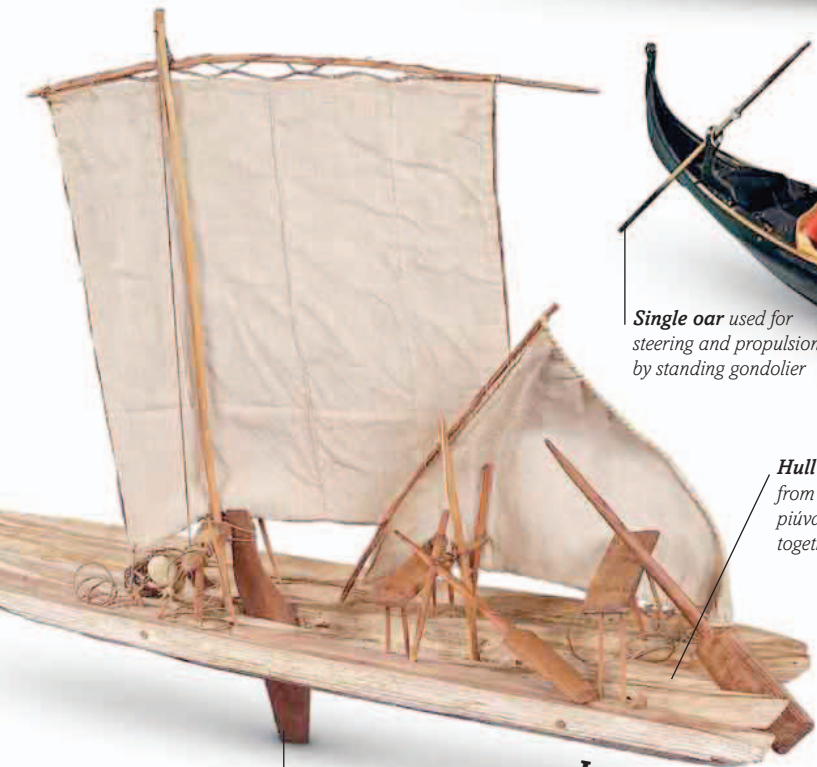

Bamboo punting pole

Woven cord rigging

Battle canoes could be more than 100 ft (30 m) long and hold up to **200 warriors**.

Battle canoe Fiji

Rounded roof shelter used for sleeping in

Each of the two hulls was covered in gum and mulberry bark, to help make it watertight

Seating for two passengers, side-by-side

Steel bow, weighing 22–44 lb (10–20 kg), helps balance weight of gondolier at the back

Gondola Italy

Single oar used for steering and propulsion by standing gondolier

Hull made of six logs from the lightweight piúva tree, lashed together

Sides added to raft to prevent catch from being washed overboard

Fishing raft West Africa

Daggerboard helps stop raft from drifting sideways

Jangada Brazil

Southeast Asia, another flat-bottomed boat, the **sampan**, is used by people to fish, travel, and even live in. In the Arctic, single- and two-person **Inuit kayaks** were used to hunt for mammals and fish, while in Indonesia, brave hunters chased after sperm whales, often two or three

times longer than their flimsy **whaling boats**. On the Pacific island of Fiji, people built larger **battle canoes**, featuring a platform laid over a double hull. And in Italy, slender **gondolas** travel the canals that crisscross the city of Venice, acting as water taxis.
