engine and propeller at the front, or were monoplanes, with a single pair of wings. Early aircraft were built light, using wood, cloth-covered wings, and wires to brace and stiffen their structures. The **Blériot XI** carried French aviator Louis Blériot on the successful first flight from

France to England across the English Channel in 1909. The **Deperdussin Type A** flew 60 miles (100 km) at a record speed of 60 mph (100 km/h) in 1911, carrying two people. This, and other record breakers, helped to prove that planes could be a practical form of transportation.
