*Low height to enable easy loading of cargo*

**Jeep Wagoneer** USA 1972

*Wheels powered by 8-liter engine*

**Spyker 60HP**  
Netherlands 1903

**Subaru Leone Estate** Japan 1972

*Rear seats fold down to create large cargo space*

*Car switches between four- and two-wheel drive*

*Top speed of 154 mph (248 km/h)*

**Audi Sport Quattro** Germany 1983

*Low rear spoiler*

**Daihatsu Sportrak** Japan 1987

*Small 7 ft 2 in (2.2 m) wheelbase*

*Turbocharger boosts engine power to 185 horsepower*

**Lancia Delta Integrale**  
Italy 1987

## STEEP CLIMB

*Most 4x4s can climb at angles up to 45°*

Most cars transmit power from their engine to either the front or rear wheels, but not four-wheel drives. Known as "4x4s," these cars direct power to all four wheels, offering better grip on slippery roads and tricky off-road conditions.

In 1903, the **Spyker 60HP** used the first four-wheel drive on a gasoline-fueled car. However, only military and special purpose off-road 4x4s, such as Land Rovers, were built in large numbers until the 1960s and 1970s. The **Subaru Leone Estate** was one of the first everyday 4x4s. It was
