

Barnard's Star
is moving toward
us at over **66 miles**
per second (100 km
per second)

△ Pipe Nebula
Giving the appearance of a gap in the Milky Way, the Pipe Nebula is a long cloud of interstellar dust that blocks out light from the background stars in this area toward the central bulge of our galaxy. The nebula can be made out with the naked eye on clear, dark nights.

36 Ophiuchi
Binary pair of orange dwarf stars divisible through small telescopes; orbital period 470 years
