

Upon seeing Iguacu Falls for the first time, **U.S. First Lady Eleanor Roosevelt** is reputed to have exclaimed **"Poor Niagara!"**

▷ **FEEDING OPPORTUNITY**

Waterfalls may be home to a variety of plants and animals. Black-fronted piping guans live in the Atlantic Forest and sometimes venture out onto Iguacu Falls to search for mollusks and insects.

◁ **WATER VOLUME**

The amount of water in a waterfall determines its erosive power. On average, more than 26.4 million gallons (100 million liters) of water flows over Iguacu Falls every minute—one of the largest volumes of any waterfall on Earth.

Devil's Throat

△ **BASALT OUTCROPS**

The hard caprock forming the crest of the falls was created during flood basalt eruptions that covered the region in layers of lava more than 120 million years ago.

Main flow of falls

This cross-section downstream of the Devil's Throat shows the channel through which half of the Iguacu's waters flow. A further series of falls lie below and to the right, on the Argentina side.
