

There is no air on the Moon, so astronauts have to wear spacesuits so they can breathe.

Apollo spacecraft

Orbiting the Earth

The Moon travels around the Earth about once every 27 days. The Moon appears to change shape in the sky depending on which parts of it are lit by the Sun.

The Saturn V rocket is the largest and most powerful rocket ever built.

Rockets travel at about 35,400 kph (22,000 mph). That's pretty fast!

Rocket power

To get to the Moon, humans had to first develop a rocket powerful enough to launch the Apollo spacecrafts into space.

Ladies and gentlemen, I present the Saturn V rocket!

The heat produced by a rocket could heat 85,000 homes for a day!
