

Under the sea

Coral reefs are amazing underwater structures formed by living creatures. They grow in warm, shallow waters in tropical regions and are home to a dazzling variety of life.

A stinging anemone provides a safe haven for clownfish...

...while clownfish scare off fish who want to eat the anemone!

Reefs are home to all sorts of fish.

The banded sea krait is a type of sea snake.

This type of coral is called table coral.

Mountains

The Himalayan mountain range in Asia is a tough place to live. Animals and plants have to cope with extreme cold, storms, and living at great heights.

Golden eagles have incredible eyesight for spotting prey from great distances.

Snow leopards are incredibly rare. They eat wild sheep and goats.

Pikas are hunted by golden eagles.

Wild goats, like this markhor, munch plants and spread seeds in their dung.

Mount Everest in the Himalayas is the world's highest mountain.
