

Graphs make it easy to see how things are changing.

Keep a record

Scientists note down measurements regularly, so they can see how things change over time. They use graphs and charts to compare measurements.

Litres and millilitres are used to measure liquid.

In the USA, people often use cups to measure volume.

Volume

Volume is the amount of space something takes up. Volume measures size, not weight. Two objects might have the same volume but very different weights.

Kitchen scales help us weigh ingredients for cooking.

Weight

Weight tells us how heavy something is. If you have some scales at home you can weigh yourself!
