

Neck

To turn your neck, your **rotatores**, **multifidus**, **sternocleidomastoid**, and **semispinalis cervicis** engage on the side you are turning away from (contralateral, this model's left) while stretching on the opposite side (ipsilateral, this model's right).

Torso

Your **spinal extensors** and **transversus abdominis** elongate and stabilize your spine. Your **rhomboids** and **middle and lower trapezius** retract your scapulae.

Extended leg

Your **hip extensors** engage while the **quadriceps** extend your knee. Your **hip flexors** stretch while stabilizing your hip. The **fibularis muscles** lengthen while actively pressing the outer edge of your foot down. Your **calf muscles** and **tibialis anterior** stabilize your ankle.

Front leg

Your front **hip flexors** and **hip external rotators** actively work to stabilize your hip. Your **gluteus maximus** is stretching while engaging to hold the pose. Your **hamstrings** flex and stabilize your knee, while your **quadriceps** engage in a lengthening position to stabilize. Your **calf muscles** and **tibialis anterior** engage to stabilize your ankle.
