

Breath and concentration

Notice if you tend to hold your breath, which is common in balancing poses. Holding your breath builds up carbon dioxide in your system. When your cells get irritated enough, they alert the respiratory center of your brain that you are in distress. Breathing steadily here calms your nervous system.

Pelvic alignment

You are not trying to point your knee directly to the side, as your hip will probably not allow it. Plus, trying to do that puts your pelvis out of alignment. Instead, keep your hip facing forward with your knee angled at a comfortable diagonal for your unique bone structure.
