

SKELETAL SYSTEM

The **206 bones** that make up your skeleton are dynamic, living organs. Together they form a framework for your body that provides structure and protection, and has the ability to move.

SYSTEM OVERVIEW

Your bones are made of collagen and they store calcium, a mineral that makes them strong and is vital for bodily functions. They also contain bone marrow where blood cells are produced. Bones form joints, which are supported by cartilage and structures such as ligaments. Yoga can support your bone and joint health.

Bone structure

Bone has a smooth outer connective tissue shell called periosteum. Inside this is a strong, dense layer known as compact bone. Deeper still is spongy bone with honeycomblike spaces; this is strong yet light.
