

Glute engagement

You must engage your glutes and hamstrings to extend your hips into Bridge. However, you should not do this by forcefully clenching together your buttocks. Instead, isometrically engage by gliding your heels back toward your head (without moving them on the mat) while imagining driving your knees forward.

**Closed chain movement**

A kinetic chain is a line of joints and muscles that affect each other. Bridge is a closed chain because both ends of the chain (shoulders and feet) are fixed in place. In an open chain, one side of the chain is not fixed, like the arms in Warrior poses. Closed chains tend to be more stable.
