

Neck

Your **cervical extensors** engage to extend your neck, and the **cervical flexors** engage while lengthening to stabilize. This prevents your head from dropping back and creates an even curve through the length of your spine.

Torso

Your **spinal extensors** engage to extend your spine while your **abdominals** stretch. Your **pectoralis major** stretches as you broaden your chest while adducting your shoulders. Your **middle** and **lower trapezius** engage with your **rhomboids** to retract and depress your scapulae.

KEY

--- Joints

○ Muscles

● Engaging

● Engaging while stretching

● Stretching

Upper arms

Your **triceps** engage to resist gravity, pressing into the ground as if you are moving toward elbow extension, while maintaining some elbow flexion. Your **biceps** also engage to stabilize.

Lower arms

Your **pronators** engage to pronate your forearms, pressing your thumbs more firmly into the mat.
