

ALIGNMENT

As you lift your shoulders and legs, focus on elongating your spine. Reach the crown of your head forward and upward, and aim for an even-feeling curve all the way along your spine, including in your neck.

Neck and arms

Your **cervical extensors** engage to extend your neck, and your **cervical flexors** engage while lengthening to stabilize your neck, preventing throwing your head back and creating an even curve in your spine. Your **posterior deltoids**, **latissimus dorsi**, and **teres major muscles** engage to extend your shoulders, while your **triceps** extend your elbows.

KEY

••• Joints

○ Muscles

● Engaging

● Engaging while stretching

● Stretching

Torso

Your **spinal extensors** engage while your **abdominals** and **pectoralis major** stretch. Your **middle and lower trapezius** engage with your **rhomboids** to retract your scapulae, while your **serratus anterior muscles** engage to help stabilize them.
