

PELVIS

Your pelvis includes two hip (coxal) bones connected by your sacrum. The sacrum, which means “sacred” in Latin, is the triangular bone with the tailbone at the lower, or inferior, end; it acts like the keystone to an arched bridge, forming a structurally sound base for your spine.

Neutral pelvis

A neutral pelvis facilitates a neutral spine and vice versa. Imagine your pelvic bowl filled with water. Finding a neutral spine and pelvis means that the water wouldn't spill backward, forward, or to the side—such as when one of your hip points is lifted or your pelvis is rotated.
