

Q HOW DOES YOGA AFFECT MY BONES AS I AGE?

Yoga can feasibly protect you from fractures associated with osteoporosis by preventing falls and strengthening the bone and muscles around common fracture sites, such as T9 and T10 (vertebrae

at the base of the upper back), wrists, and the hip, particularly with asanas such as the below. Yoga also helps maintain the ability to safely get up and down from the floor so you can protect your joints and keep active.

Yoga is becoming more popular with those age **65** and over.
