

Pelvis differences

The shape of the pelvis differs in everyone. A key difference is between males and females—women tend to have a wider pelvis to allow for childbirth. Variance in pelvis shape contributes to the fact that everyone has their unique expression of asanas. In Bound Angle your pelvic structure is a factor in how far you can lower your knees.

Pelvis softening

Women release a hormone called relaxin during pregnancy. Some research suggests women release small amounts monthly around ovulation. Relaxin prepares the body for childbirth, prompting the ligaments and fibrocartilage that support the pelvis to relax and allow for more flexibility. Women should take care to not overstretch during these times.

Upper arms engage to grasp feet

Engage thighs for a few breaths, then allow quadriceps to stretch further
