

» CLOSER LOOK

Cow Face works your shoulders dynamically—including your deltoid muscles. Compression at your shoulder joint can also lead to cardiovascular shifts both system-wide and in local blood vessels.

**Dynamic deltoids**

Your deltoids are split into three parts, or heads, which have opposing actions when engaged. Some research suggests that there are 19 parts filled with muscle fibers that can be controlled independently by your nervous system. This pose dynamically engages and stretches each part of your deltoids.
